

Security – nothing else

The certification awarded to us is a recognition of our product and service excellence we constantly provided to our customers since 100 years of Preh company tradition and in over 30 years at automotive business. Due to the increasing digitalization of our products, we see ourselves as a trustworthy partner in the field of cyber security.

This involves preventing the risk of unauthorized digital access to our products throughout the entire product lifecycle. Our goal is to fully meet our customers' expectations in terms of product and service quality. In addition, it is essential to meet all mandatory cybersecurity requirements. Our policies, processes, systems and objectives are based on the requirements of international standards, customer expectations, our knowledge and experience. These form the basis of our products.

Security Culture

In addition to policies, processes and systems geared to quality and efficiency, we actively ensure a security-oriented culture and way of working. In this context, we see cybersecurity as an elementary component of information security. We achieve this through regular training and awareness programs for all disciplines with an impact on product compliance.

Innovation and Security

We develop and manufacture innovative, safe products and protect those against risks of unauthorized digital access. Thereby we use responsibly our resources – natural, financial as well as human resources - throughout the entire product lifecycle in a responsible manner.

Commitment to Security

We commit ourselves, starting with the management board and together with all employees in the company, to implement the necessary cybersecurity requirements in corporate activities, products and services.

Our acting has the goal to exclude unauthorized digital access to our products. Thus we contribute for a secure mobility.
